

The SHOE CLAMP was designed & developed for one of the largest soccer shoe retail and catalog sales companies in the US.

SHOE CLAMPS

Rail mounted Clamps for Embroidery on shoes and other hard to hold items.

SHOE CLAMPS

The SHOE CLAMP series is single window specialty clamp designed especially for sewing on the sides of soccer shoes. The clamps are built with high strength aluminum and are very heavy duty. The clamping pressure required to hold a stiff leather shoe while sewing over a machine sewing arm is extreme, and the SHOE CLAMP is up to the task. The sewing fields on a shoe are limited by shoe size, design location, and size of your embroidery machines sewing arm, but with the Hoop Tech SHOE CLAMP you can personalize soccer shoes, running shoes, gym shoes, slippers, UGG boots and many more hard to hold items.

To use the SHOE CLAMP, attach it to the drive bar on your embroidery machine, open the upper clamping window with the large clamping knob, insert the shoe side or tongue, align the shoe using the window sides for reference and tighten the clamping knob to get the desired hold. Then run a trace to make sure that there is enough room inside the shoe for the design.

The SHOE CLAMP is available in two window sizes - 2.75 x 1.75 & 3.5 x 1.75

2.75 x 1.75

3.5 x 1.75

The SHOE CLAMP is mounted directly to the machine drive bar (same as your cap driver), for a positive attachment. Machine specific adapters bolt to the clamp body and are used to attach and adjust the clamp to fit your embroidery machine. Hoop Tech makes adapter brackets for all major embroidery machine brands.

The Shoe Clamp uses the same adapter brackets as the Slim Line 1 Clamping System
