SHOE CLAMPS
Rail mounted Clamps for Embroidery on shoes and other hard to hold items.

SHOE CLAMPS
The SHOE CLAMP series is single window specialty clamps. They are designed specifically for sewing on shoes and other items that are hard to hold and need to be held steady and steady. The clamps are build with high strength aluminum and are very heavy duty. The clamping pressure required to hold a tight leather shoe while sewing over a machine sewing arm is extreme, and the SHOE CLAMP is up to the task. The sewing fields on a shoe are limited by shoe size, design location, and the size of your embroidery machines sewing arm, but with the Hoop Tech SHOE CLAMP you can personalize soccer shoes, running shoes, gym shoes, slippers, UGG boots, and many more hard to hold items.

The SHOE CLAMP is designed specifically for shoes or other items that are hard to hold and need to be held steady. The clamps are build with high strength aluminum and are very heavy duty.

To use the SHOE CLAMP, attach it to the drive bar on your embroidery machine, open the upper clamping window to the maximum opening height, insert the shoe side or tong, align the shoe using the window sides for reference and tighten the clamping knob to get the desired hold. Then run a test to make sure that there is enough room for the design.

The SHOE CLAMP is mounted directly to the machine drive bar to get the strongest possible clamping force. For optimal clamping force, this specific adapter must be used in the clamp body and the adapter must be used in the slot in the clamp body for the best clamping strength.

The SHOE CLAMP is available in two window sizes – 2.75 x 1.75 & 3.5 x 1.75.

The Shoe Clamp uses the same adapter design as the Slim Line 1 Clamping System.

The SHOE CLAMP is mounted directly to the drive bar of your embroidery machine. For maximum clamping force, this specific adapter must be used in the clamp body and the adapter must be used in the slot in the clamp body for the best clamping strength.
